

# Helpful Tips From Synergy Response

## Common places to find mold in your home

---

### Bathrooms and Kitchens

The most common area where you will find mold is under the sinks because of leaks.

### Appliances

Another potential source of leaks are your refrigerator, dishwasher, and washing machines. Check behind and under the appliances for mold.

### Roof

If you notice water stains on the ceilings, then your roof could be leaking which will cause mold if the leak is not repaired.

### Windows

If you have condensation in the home, you will likely find mold on the window sills and around the windows.

### Basement

If there is high humidity in your home, then check your basement and other areas of the home for mold.

### Closets

Leaky pipes, high humidity, and other sources of moisture can result in hidden mold in your closets. If there are boxes in the closet, move them and check the walls and floor for mold.

### Crawlspaces

Moisture in your crawlspace will cause mold to grow and may require crawlspace encapsulation.

---

**What is mold?** Mold is a type of fungus that consists of small organisms found almost everywhere.

**What does it look like?** Mold can be black, white, orange, green, or purple.
