

# Content Cleaning

Save your personal belongings! Restore, don't replace.

## What is Content Cleaning?

When disaster strikes, it's not just your home that is affected but also the contents. Synergy Response's content cleaning is available to bring life back to these items after water, fire, mold, or smoke damage. Restoration of content is less expensive than replacement! Our state-of-the-art ultrasonic cleaning system restores your items with superior cleaning capabilities and unsurpassed speed with Fireline Equipment.

## How Does the Process Work?

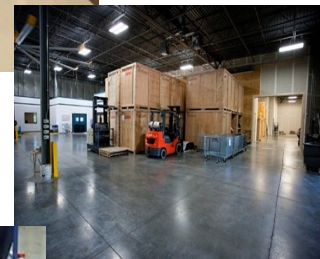

Let us take the worry out of cleaning after a loss.

Our trained professionals will identify items that can be restored and which items are unsalvageable. We work with your insurance company to provide a seamless transaction providing all necessary documentation.

Our experts will take them to our local and modern clean room where trained professionals will start the cleaning process. Each item carefully removed from packing, cleaned, dried, and then repacked.

Once all the contents are clean, we will bring them back to you!

If your items are ready before your home is, we can store them at our local warehouse until your restoration project is complete.
